

PRODUCT / PROCESS CHANGE NOTIFICATION

Notification Date: 8/23/2011

Projected Completion Date: Immediate

PCN Number : 0073

Product Identification (Including Customer P/N):

General Oscillator Family.

Detailed Description of Changes:

The packaging materials are changing from a "pink-poly" foam tray to a thermoformed ESD plastic tray. Pictures are shown in the secondary tab.

Old Material: Cross linked Polyethylene / Surface resistivity - typical 10¹⁰ ohms / square

New Material: Permanently Coated Static Dissipative PETG / Surface resistivity - typical 10¹⁰

Reason for Changes:

New thermoformed tray provides increased protection of terminals and feedthroughs in that they are not inserted into the packaging foam, but floating within a cavity. Terminal distortion for through hole and surface mount components has been eliminated with adoption of new packaging material. Clear nature of plastic allows for easier visual inspection of packaged components

Projected Timing of Change and Implementation Date:

Immediate.

Anticipated Impact on Quality and Reliability:

None.

Qualification Plan (if applicable):

Units have successfully shipped to other customers within the same / similar packaging methods with no issues or concerns.

Last Time Buy Date:

N/A

Last Time Delivery Date and Comments (if applicable):

N/A
